How can REACH  
CAD enable remote  
Business Process  
Outsourcing (BPO)?

# 12

## How can REACH CAD enable remote Business Process Outsourcing (BPO)?

REACH CAD enables remote Business Process Outsourcing (BPO) in the apparel and fashion industry in several ways:

### **1. Streamlined Pattern Engineering**

REACH CAD allows for efficient remote pattern engineering by providing specialized tools for creating and modifying garment patterns.

**Pattern engineers can work remotely using REACH CAD to:**

- (i)** Create accurate garment patterns based on design specifications and sketches
- (ii)** Collaborate with product development teams located anywhere in the world
- (iii)** Deliver finished patterns digitally in various formats.

This eliminates the need for manual pattern creation and enables seamless remote collaboration between designers and pattern makers.

## ***2. Efficient Grading and Marker Planning***

REACH CAD facilitates remote grading and marker planning processes:

- (i)** Pattern grading can be done accurately and quickly using customized tools.
- (ii)** Marker planning can be carried out efficiently within defined parameters by experienced pattern masters.
- (iii)** Graded patterns and markers can be delivered promptly in digital formats.

**This allows companies to outsource these critical processes to remote teams without compromising on quality or efficiency.**

### **3. Digital Asset Management**

REACH CAD helps in building a digital knowledge base that can be accessed remotely:

- (i)** Patterns can be stored digitally, preventing wear and tear of physical patterns.
- (ii)** Digital patterns can be easily modified to create new styles.
- (iii)** The knowledge base can be used to recreate garment patterns and markers as needed.

This feature enables remote teams to access and work with pattern libraries from anywhere, facilitating efficient BPO operations.

### **4. Collaborative Workflow**

REACH CAD supports collaborative team working, which is crucial for remote BPO:

- (i)** Multiple team members can work on the same project simultaneously

**(ii)** Changes and updates can be tracked and shared in real-time.

**(iii)** Communication tools within the software can facilitate remote discussions and feedback.

This collaborative environment helps overcome the challenges of remote work and ensures smooth coordination between in-house and outsourced teams.

## **5. Global Delivery Capabilities**

REACH CAD supports global delivery of outputs:

**(i)** Digitized patterns can be sent in .dxf format.

**(ii)** Full-length markers and graded patterns can be plotted and delivered globally.

**(iii)** High-quality plotting outputs can be provided 24/7 to manufacturing units worldwide.

This capability ensures that outsourced work can be seamlessly integrated into the production process, regardless of geographical locations.

By leveraging these features, REACH CAD enables fashion and apparel companies to effectively outsource various aspects of their product development process, from pattern creation to marker planning, while maintaining high standards of accuracy and efficiency.
